

SEAMLESSLY INTEGRATES WITH YOUR EMR / PM FOR A COMPLETE SURGERY SCHEDULING SOLUTION

Using HL7 technology, Surgimate complements your existing PM / EHR systems with the following features:

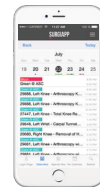

Share one surgical calendar across the practice

Specifically designed to manage surgeries. Filter by surgeon, co-surgeon, PA, facility, or scheduler. Color coding makes it easy to coordinate multiple block-times & non-surgical appointments.

Give your surgeons a HIPAA compliant app to view their schedule

The Surgimate App empowers surgeons to receive instant notifications and communicate post-op information to the back-office. Unlike many popular applications (Outlook & Google Calendar), the Surgimate App is completely HIPAA compliant.

Track all pre-surgery requirements on one dashboard

Electronically track all items required for surgery including clearances, insurance authorizations and surgery status. All data is stored in one centralized dashboard that anyone can access, from any location.

Generate all surgical paperwork automatically

With one click, generate all surgical paperwork – customized to match the needs of all facilities and insurance companies, and filled with 100% accuracy.

Get vital snapshots of your business

Powerful business reports capture trends in surgical volume, block time utilization, patients who require follow-up, and cancellations within any given time period.

Clients nationwide use Surgimate in conjunction with:

Surgimate fills the gaps that our EHR cannot perform.
